Subject: microsoft settlement

Time Warner knew that Netscape had real problems when they bought it. Why are they trying to pull down the only web browser that does what it is to do more often than not. The market place has and always will be the one who determines who is going to make it and who is not. It has spoken why can't people just leave this company alone. Time Warner really has nothing legitimate to complain about nor even think of going to court.

sincerely
